

Tata Power Thermal Power Plant Visit

40 members of Tata Power Energy Club from Sri Ma Bal Niketan, Thane, visited Tata Power's thermal power plant in Trombay on the eve of World Environment Day 2011.

The children were given an understanding of the power generation process, sensitized on the need to conserve energy and natural resources and their role in spreading this message to society at large. They got an opportunity to interact with the Tata Power team and get answers to questions like "How is power generated?", "What are the renewable sources of energy available today?", "How does climate change affect us?", "What can we do to conserve energy?" and many others.

The power plant visit was an eye-opening experience for the teachers and students alike. "The concept of Energy Club is brilliant", said Ameya Joshi, a student of Sri Ma Bal Niketan. "The entire presentation was very informative and well executed. We teachers too learnt many things we were unaware of. The children will surely spread the word and take steps towards this initiative. More of such initiatives should be taken up", said Mohini Pol, a science teacher from the school.

Mr Vijay Chourey, Head-Trombay Thermal Generation Station further added, "Tata Power Energy Club is one of our key initiatives on energy conservation and the students were engaged to ensure commitment towards resource conservation."
